## **KNEE ARTHROSCOPIC DEBRIDEMENT, LYSIS OF ADHESIONS, MANIPULATION UNDER ANESTHESIA**

### **1. DIET**

- Begin with clear liquids and light foods (jellos, soups, etc.)
- Progress to your normal diet if you are not nauseated

### **2. WOUND CARE**

- Maintain your operative dressing, loosen bandage if swelling of the foot or ankle occurs.
- It is normal for the knee to bleed and swell following surgery – if blood soaks onto the bandage, do not become alarmed – reinforce with additional dressing.
- Remove surgical dressing on the second post-operative day – if minimal drainage is present, apply waterproof band-aids over incisions and change daily.
- To avoid infection, keep surgical incisions clean and dry – you may shower by placing waterproof bandaids over incision areas. Please remember to change bandaids daily.
- NO immersion of operative leg (i.e. bath) \*Brace may come off to shower.

### **3. MEDICATIONS**

*\*Do not drive a car or operate machinery while taking the narcotic medication\*, and increase the time intervals between narcotic pain medication usage*

- Pain medication is injected into the wound and knee joint during surgery – this will wear off within 8-12 hours.
- Most patients will require some narcotic pain medication for a short period of time.
  - Primary Medication = Norco (Hydrocodone)
  - Take 1 – 2 tablets every 4 – 6 hours as needed
  - Max of 12 pills per day
  - Plan on using it for 2 to 5 days, depending on level of pain
  - Do NOT take additional Tylenol (Acetaminophen) while taking Norco or Vicodin.
- Common side effects of the pain medication are nausea, drowsiness, and constipation – to decrease the side effects, take medication with food.
- If constipation occurs, consider taking an over-the-counter laxative such as prune juice, Senekot, Colace (or Periocolase), or Miralax.
- If you are having problems with nausea and vomiting, contact the office to possibly have your medication changed
- For nausea, take prescribed Zofran / Phenergan

**Lisa Kaplin, DO**

- Ibuprofen 600-800mg (i.e., Advil) may be taken in between the narcotic pain medication to help smooth out the postoperative “peaks and valleys”, reduce overall amount of pain medication required, and increase the time intervals between narcotic pain medication usage.

## 4. ACTIVITY

- BEGIN USING CPM MACHINE IMMEDIATELY. USE AS FREQUENTLY DURING THE DAY AS POSSIBLE. START PHYSICAL THERAPY AS SOON AS POSSIBLE.
- Begin exercises 24 hours after surgery (straight leg raises, quad sets, heel slides and ankle pumps) unless otherwise instructed.
- Discomfort and knee stiffness is normal for a few days following surgery – it is safe and, in fact preferable to bend your knee (unless otherwise instructed by physician).
- Complete exercises 3-4 times daily until your first postoperative visit – your motion goals are to have complete extension (straightening) and 90 degrees of flexion (bending) at your first postoperative visit unless otherwise instructed.
- Do ankle pumps continuously throughout the day to reduce the possibility of a blood clot in your calf (extremely uncommon).
- Formal physical therapy (PT) will begin after your first postoperative visit. You will be given a script for this at that time.

## 5. ICE THERAPY

- Begin immediately after surgery.
- Use Duracold ice packs (if machine not prescribed) every 2 hours for 20 minutes daily until your first post-operative visit – remember to keep leg elevated to level of chest while icing.

## 6. EXERCISE

- Begin exercises 24 hours after surgery (straight leg raises, quad sets, heel slides and ankle pumps) unless otherwise instructed.
- Discomfort and knee stiffness is normal for a few days following surgery – it is safe and, in fact preferable to bend your knee (unless otherwise instructed by physician).
- Complete exercises 3-4 times daily until your first postoperative visit – your motion goals are to have complete extension (straightening) and 90 degrees of flexion (bending) at your first postoperative visit unless otherwise instructed.
- Do ankle pumps continuously throughout the day to reduce the possibility of a blood clot in your calf (extremely uncommon).
- Formal physical therapy (PT) will begin after your first postoperative visit. You will be given a script for this at that time.

## 7. EMERGENCIES

Contact Dr. Kaplin or her medical assistant at 609-267-2333 if any of the following are present:

- Painful swelling or numbness
- Unrelenting pain
- Fever (over 101° - it is normal to have a low grade fever for the first day or two following surgery) or chills
- Redness around incisions
- Color change in wrist or hand
- Continuous drainage or bleeding from incision (a small amount of drainage is expected)
- Difficulty breathing
- Excessive nausea/vomiting
- \*\*If you have an emergency after office hours or on the weekend, contact the same office number 609-267-2333 and you will be connected to our page service – they will contact Dr. Kaplin or one of her physician assistants if she is unavailable. Do NOT call the hospital or surgical center.

\*\*If you have an emergency that requires immediate attention, proceed to the nearest emergency room.

## 8. FOLLOW UP CARE + QUESTIONS

- A member of Dr. Kaplin's team will call you on your first day after surgery to address any questions or concerns. If you have not been contacted within 48 hours of surgery, please call the office at 609-267-2333.
- If you do not already have a postoperative appointment scheduled, please contact the office during normal office hours (609-267-2333) and ask for appointment scheduling.
